factories

ROTO is a global producer of high-quality plastic products from polyethylene, polypropylene, polyamide, XPE and ABS with production factories in four European countries. ROTO is a family business company that is presented on the market as a successful manufacturer and reliable business partner for more than 40 years.

ROTO is a leading rotational moulder in Europe with over 4000 different products in range and size up to 70.000L. These products are exported in more than 50 countries all over the world.

ROTO performs all stages of the business process, from product development, product analysing, own tool production, prototype manufacturing, serial production, marketing & sales, distribution and after – sale service. High quality technical products are result of latest production technologies and strong R&D department.

Shock resistant

Families of products: same design and different size

Weather proof and UV rays resistant

Produced according the EU standards

Very light and easy to handle

Ecological: non toxic and recyclable

INSTRUCTIONS FOR ASSEMBLY

Instruction for assembly are for next type of Wheelbarrows:
Two wheels Wheelbarrow with galvanized base 250 L, 300 L, 350 L

Necessary tool for assembly:

- Key for nut M8 and M6
- Hammer (weight 300 g)
- Electrical or battery driller and M8 drill

Assembly procedure (please see pictures below):

- bottom of the tray for wheelbarrow must be placed upwards (4)
- tray of the wheelbarrow must be aligned with base of the wheelbarrow (1)
- 4 holes must be drilled on tray (C) with battery driller-drill M8
- 4 screws M8 (11) must be inserted in 4 holes. With hammer we align screws (no space between tray and screws head is allowed)
- washers (12) with nuts M8 (13) must be fastened on the bottom of base
- axis (2) must be inserted on the base (A) and fastened with 4 screws, washers and nuts M8 (11, 12, 13)
- on each side of the axis 2 wheels (3.3) must be positioned and fastened with 2 washers M20 (7). Two safety pins must be inserted (8) on outer side of the wheels
- we flip around wheelbarrow. See picture 4.
- handle (5) must be inserted in to opening (B) and fastened with 2 screws M6X50 (9) and 2 bolts M6 (10)

WHEELBARROWS

FKK TIPPING wheelbarrows

Roto FKK are tipping wheelbarrow which are fitted with a galvanised metal frame, large Polyethylene tray and two pneumatic wheels to deliver superior maneuverability and smooth handling. The massive Polyethylene tray allows you to load up huge volumes of food and waste in your farm. The construction and material used for frame offers durability, strength and a resistance.

Product	Frame	Code	EAN Code	Size [mm]	Wheel

Moto wheelbarrows

Motobarrow through having its leading wheel driven by an electric motor is ideal for carrying heavy or bulky material. It functions perfectly well in numerous domestic and industrial conditions, it will work well in difficult terrain including up or down hill slopes. Motobarrow makes load manipulation much easier than standard wheel barrow's, its 12 volt lead battery is safe to use with no danger of electrical spillage.

Additional equipment: charger for battery

FEEDERS

The durable polyethylene rectangular feeders are suitable for feed chicken, turkey, pigs, ...

Roto feeders for horses are made of durable polyethylene material.

Cornered tubs are very convenient, because take up a little space in corner.

ADVANTAGES

- long lifetime
- the good quality
- an attractive stall equipment
- easy and fun animals feeding
- easy to install
- good thermal insulation
- all metal parts are galvanized
- easy maintenance
- easy filling
- easy protection from decay, disinfection

SILO

Silo is intended to store feeding stuff, grain, briquettes, flour, etc. It is a one piece polyethylene pantry and constructed in a way to easily support the weight of stored material.

PLACING

Silo can be placed under a roof or can stand outside. It should be placed on flat, reinforced concrete slab (at least 10 cm thick and in size of 4 x 4 m). To prevent silo from overturning, it should also be bolted onto the slab.

FILLING

The silo can be filled through an opening at top or through filling pipe. When the material is inside a silo, the lid should be closed. Silo can be filled automatically over filling pipe (additional accessory).

EMPTYING

Can be discharged through the opening at the bottom of the silo. It is also possible to install your own screw snail at the place of use.

TECHNICAL CHARACTERISTICS

The silo is intended to store food and is made of polyethylene. The material assures you the best characteristics for storing and provides long-term use. The inner side of the silo is covered with paraffin, which prevents material from sticking on the walls. Thick walls provide excellent thermal insulation and prevent accumulation of condensation. The silo construction ensures water resistance and easy cleaning. Contents of the silo remain dry, no matter if it is placed in the open. This is important to ensure excellent quality materials.

SILO

SEGMENTS silo

This is a freestanding silo. It serves to store clover, ground maize, maize grain, sugar beet pulp, grain, flour, coffee and sawdust. This is the best solution for farmers who have lower daily material removal. This way the removal of segments does not cause subsequent fermentation and spoilage of material. When a segment is empty, we can remove it and ensure a better access to content.

Product	Code	EAN Code	Size [mm]

RoSILO free standing

USE

Silo is intended to store feeding stuff, grain, briquettes, flour, etc. It is a one piece polyethylene pantry and constructed in a way to easily support the weight of stored material.

EQUIPMENT

- Silo has security gate, screw conveyors and filling pipe, which are made of corrosion resistant material.
- There are two openings at the top of the silo.

Ø800 mm, where a filling pipe diameter (110 mm) is placed, and the second (Ø 500 mm) for insight into the silo.

- Both openings are covered with cover which are waterproof sealed. Therefore the silo can be placed outdoors. There are also outflow doors for manual material removal at the bottom of it.
- Possible filling through vacuum or pleasure pump.
- Roto provides complete solution for silos.

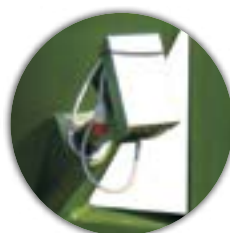

RoSILO free standing

opening

stairs

screw
conveyors

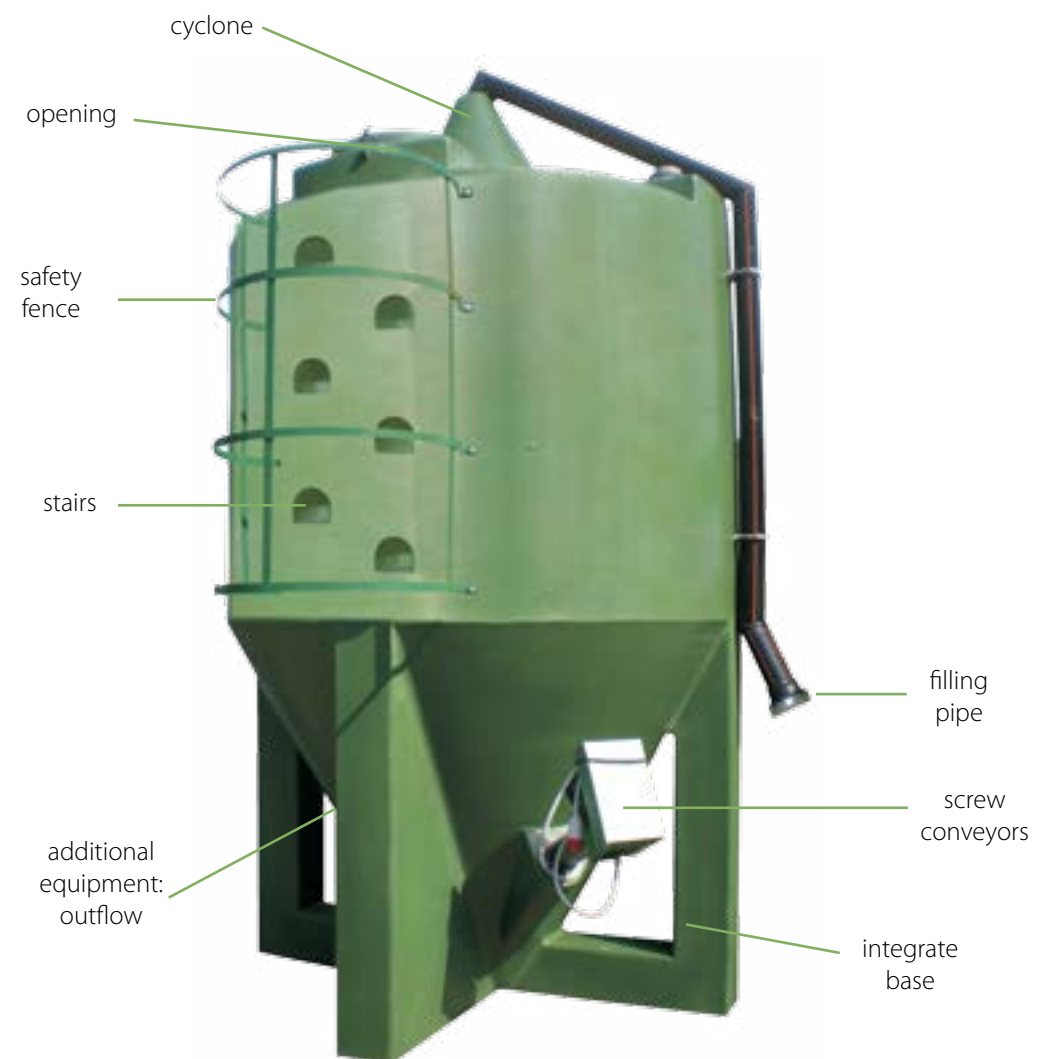

filling
pipe

TECHNICAL CHARACTERISTICS

- Since it is a one-piece model, it is 100% waterproof and prevents moisture from leaking into the silo.
- Polyethylene Roto silo has 12 – 14 mm wall thickness, which provide excellent thermal insulation. Thus, the silo will maintain its inside temperature even if outside temperatures change rapidly.
- Smooth walls prevent sticky materials from sticking to the wall.
- The silo weights just over 300 kg. Its weight allows

easy placement and transportation. It is well balanced so it doesn't need to be installed on concrete floor.

- Due to freestanding form, its mobility is excellent. The silo can easily be moved from one place to another.
- Roto's 10m³ silo is only 4,2 m high, so it can be placed inside an outbuilding.
- Silo has a long lifetime. Wall thickness, great statics and UV polyethylene stability. After this the silo can be 100% recycled.

WINE barrels

Parafined wine barrels for fermentation and storage of most, wine, cider and brandy.

ADVANTAGES

- long lifetime,
- the good quality of the wine contained,
- an attractive wine cellar,
- easy and fun cellaring,
- easy to carry because of its light weight,
- good thermal insulation,
- keeps wine at a constant temperature,
- the flat bottom enables easy transportation,
- due to its good thermal isolation, the polyethylene barrels keep wine at a constant temperature
- fermentation and storage conditions are like in wooden barrel,
- UV-stabilised polyethylen, food safe,
- produced in rotation moulding, without welding points,
- flat areas for mounting fittings.

MAINTENANCE

- plug on the cover is removed when fermentation tub is installed,
- clean the paraffin walls of the barrels with cold water,
- sulphurate the barrels with stick on the long wire or with a liquid sulphur,
- due to the large openings the barrels are easy to clean,
- barrels over 100 L have 2 spigots.

ECO cider barrels

Eco horizontal barrels for storage and fermentation of cider. Cider from apples is made from pressed apples. The juice or must is fermented with yeast to produce an alcoholic beverage usually around 6% abv. Apple cider can be made with the addition of the unprocessed juice from the fruit of a small, indigenous tree known as Speierling.

OTW tanks

The series OTW are retengular horizontal tanks, which are suitable for storage and transport of water, wine, brandy and other liquids. The OTW has a large screw lid, for an easy filling. ROTO dosing tanks are produced in a rotation moulding process made of high quality polyethylene. The standard color of the tanks is clear white.

TUBS and harvest CONTAINERS

The durable polyethylene square tubs are suitable for transport and storage of grapes and other. Reinforced edge of the tube allows it to install a mill to grind fruit.

Round conical tubs can be used for storage and transport of fruit. They could be stackable when are not in use.

Safe, durable and eco friendly harvest plastic containers will help you to save on maintenance costs, space and storage.

ADVANTAGES

- Long-lasting,
- the good quality of the grapes contained,
- an attractive wine cellar,
- easy and fun cellaring,
- easy to carry because of its light weight,
- the flat bottom enables easy transportation,
- easy maintenance,
- easy filling through a large opening,
- the inside wall of polyethylene tub is flat.

eco friendly -
possible to recycle
100% after use

WINE harvesting EQUIPMENT

ROUND tubs

Round conical tubs can be used for storage and transport of fruit. The possibility of white tub provides a hygienic integrity and transparency above the level of content.

GARDEN furniture

Rattan furniture such as chairs and tables are made of high quality polyethylene and they are the most reliable, comfortable and cost-effective option.

Using plastic outdoor furniture, in a garden or courtyard, on a balcony / terrace or elsewhere, enables you to take full advantage of the sunshine, while being assured that your outdoor plastic furniture is weather resistant (acts of nature are not covered).

This outdoor plastic furniture has been designed in a rattan style, making it just as attractive as traditional rattan outdoor furniture while being stronger, easier to clean, and waterproof.

ROTO rattan outdoor furniture is available either as an outdoor plastic patio furniture set, or as individual plastic chairs and tables to suit the needs of every customer.

ADVANTAGES

- long lifetime,
- an attractive wine cellar, garden,...
- easy and fun cellaring, gardening,...
- easy to carry because of its light weight,
- the flat bottom enables easy transportation.

USE

- for indoor and outdoor use (wine cellars and garden),
- gastro and private use,
- UV stability,
- easy maintenance,
- easy drying, protection from decay and easy transport,
- nice shape: ROTO-plastic furniture in wood design will give your wine cellar, garden or... a special flair. The furnitures are lightweight and are therefore easy to transport,
- guaranteed quality,
- light weight,
- wood effect,
- easy to clean.

SAUERKRAUT cask

Natural souring of various vegetables is the oldest method of preservation, as it was already used by ancient Egyptians. In this method of storage allows lactic acid to develop during souring, which gives the vegetable s their durability.

ADVANTAGES

The vegetables do not need to be washed. You can also sour other vegetables in the cask: Bulgarian salad, sauerkraut, Serbian cabbage, turnips, red beats, pickles, peppers, ... We include recipes so that the salad will be healthy, natural and homemade. By using ROTO cask, you are saving time and energy for canning, space in the cellar, and your vegetables will be stored in a sanitary way.

Storage vegetables in a Roto cask and eat delicious salad in the winter

SAUERKRAUT

The cabbage needs to be in good condition and completely clean for souring. Preserve the graded cabbage as soon as possible. Use spices such as: salt, pepper, bay leaf, cumin, horseradish, and hot peppers. Press the cabbage evenly so that the cabbage juice fully covers it. The cabbage should be salted evenly so that it does not release too much juice. The best temperature for souring is between 17 C and 22 C. When the souring is finished (in 4 to 5 weeks), store the cabbage at 10 C. When you take the cabbage out of the container, make sure that it stays covered with juice.

“SARMA ”

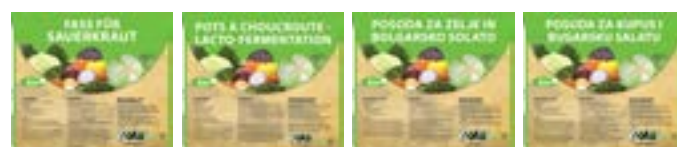

Turn the cabbage head so that the stalk is pointing upwards. Cut around the stalk at an angle until you have cut it off. Remove a few more leaves by cutting off the thicker part of the cabbage head. Slice the remainder of the cabbage head into thin slices. Mix cooled sautéed onion with smoked meat and raw ground meat into half cooked, cooled rice. Add salt and pepper, and add a pinch or two of marjoram, chopped parsley, ground sweet pepper, and an egg. Cover the bottom of the pot with smoked pork and graded sour cabbage. Wrap the cabbage rolls, place them in the pot, and put the cabbage stalk in the middle. Cover everything with the remainder of the sour cabbage. Pour in boiled water (approx. 1,5 l). Cover with a lid and cook for approximately one hour.

VINEGAR barrels

Vinegar can be medicinal, especially when it is prepared at home in the natural way. Homemade vinegar accelerates the metabolism, slows aging, helps maintain body weight, prevents the formation of fat cells, and promotes clean and glowing skin, nails and hair.

ADVANTAGES

- The vinegar will maintain the same quality
- ROTO vinegar barrels are cone-shaped, which enables the vinegar mother to grow uninterrupted and cover the whole surface of the vinegar.
- The vinegar will maintain the same level of concentration
- ROTO vinegar barrels can be sealed by pouring water into the rim of the barrel and then placing the lid on top. As a result, the vinegar does not evaporate.
- The barrels have a spigot at the bottom where the vinegar can be poured out.
- The barrels come with recipes on how to easily prepare vinegar.

HOW to prepare vinegar?

PREPARATION OF APPLE CIDER VINEGAR

- 10 kg apples (washed, crushed or sliced)
- 20 l warm water
- 8 dag yeast (2 cubes), 1 l beer, 0.5 kg sugar

Mix the ingredients in a ROTO vinegar barrel. Remove the lid from the barrel and cover the opening with gauze. Place the barrel in the sun for a few weeks (at T=25-30 C) until the apple juice ferments. Mixing with old vinegar (acetic fermentation): In the ROTO vinegar barrel, the vinegar will ferment from sugar into alcohol, and afterwards into acetic acid. After the sugar has fermented for two weeks, pour 0.5 l of old vinegar into the barrel. After a few more weeks, strain the vinegar. Vinegar mother will form on the surface, which is a natural protection for the vinegar and floats on top of it.

PREPARATION OF VINEGAR FROM WINE

- Place the WINE into a vinegar barrel and leave it in a warm place for 8 days.
- When you notice that there is acetic fermentation, pour in water and add old vinegar.
- Let it acidify at approximately 25 C, and enable fresh air to flow inside.
- After a few months, strain the vinegar into the opening of the barrel and seal it with the lid.
- The vinegar mother always needs to stay on the vinegar's surface.
- Pour water into the rim of the ROTO barrel and cover it with the lid.
- The barrel can be used for the production and storage of vinegar.
- Do not transport the barrel while there is vinegar inside, as the vinegar mother will sink and ruin the flavour of the vinegar.

FRUIT fermenting barrels

Whether you're making small amounts of brandy at home, you'll need food-grade barrel to ferment and age it in.

EQUIPMENT:

- Fermenting barrel
- Bucket Lid (with hole for airlock)
- Airlock
- outlet spigot

ADVANTAGES

- Plastic is a durable, versatile option for fermenting, and can range from inexpensive fermenting buckets to more advanced versions with additional features.
- Fermenting barrels are great to keep around for overflow situations when you need additional fermenter space in a hurry, because you can nest them to take up less space than other types of fermenters.
- They also have wide openings, which is convenient when working with fruit (i.e., adding additional, whole fruit like tart cherries to a juice fermentation).
- Additional features such as an outlet spigot above where the lees (sediment) collect which allows you to transfer juice without using a siphon (racking cane).
- The spigot saves a lot of time,
- barrels are easy to clean,
- barrels have a opening which makes working with whole fruit more convenient.
- Safe Material: barrels are made from food-grade plastic, high-density polyethylene (HDPE).

Instructions for preparing pomace

The fruit should be fully ripe, as that is when it contains the most sugar and pleasant smells. Crush the apples and pears. Squeeze the plums, peaches, and cherries into a bowl. The temperature needs to be between 15°C and 25°C for the yeast bacteria to

cause alcoholic fermentation. It is important that during the fermentation the container with the fruit is closed, so that air cannot flow in. The CO₂ that is produced by fermentation needs to get out. We recommend to install a fermentation accelerator on the lid.

Certificate for food contact material

FRUIT fermenting barrels

FRUIT fermentation barrel

The durable polyethylene rectangular barrels are suitable for transport and storage of grapes and fruit. Reinforced edge of the barrel allows it to install a mill to grind fruit. The bottom of the barrel can also be a pallet shape, which allows transport with a forklift. The barrels with a lower height can be used also for collecting cider under the press. Rectangular barrels take up little space and can be stacked one into another.

MEAT trays

Durable polyethylene trays are appropriate for salting, transporting, and storing meat. Cone-shaped, angular trays take up little space and can be stacked on or in each other. The containers are made of polyethylene and are very durable and shock resistant.

ADVANTAGES

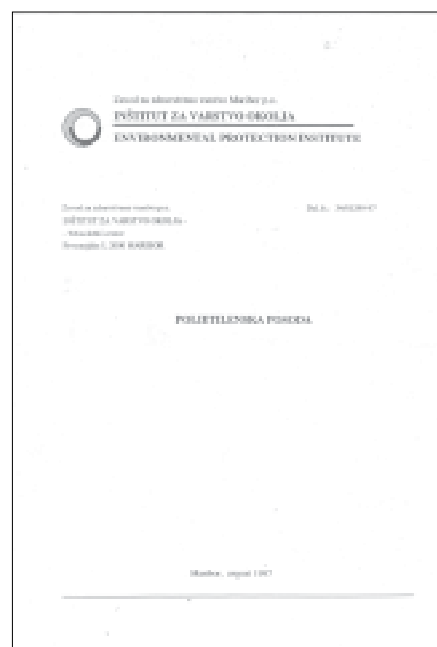

- long lifetime,
- the good quality of the meat contained,
- an attractive butchers equipment,
- easy to carry because of its light weight,
- good thermal insulation,
- keeps meat at a constant temperature,
- the flat bottom enables easy transportation (some models are stackable).

USE

- easy maintenance,
- easy filling through a large opening,
- easy drying, protection from decay, disinfection and easy transport,
- long lifetime,
- nice shape,
- guaranteed quality.

MAINTENANCE

- easy to clean,
- we clean the vessels with cold water,
- due to the large openings the vessels are easy to clean.

Certificate for food contact material

MEAT trays

MEAT trays

Durable polyethylene trays are suitable for desalination, transportation and storage of meat. Conical square trays take up little space. That is because they be stack one in or on another. Trays are made of polyethylene and are very durable.
